Abstract

PURPOSE: To provide a method and device for document display which perform the reference work of a structured document and the reference work related to the logical structure and enable a user to execute these two reference works independently of each other.
CONSTITUTION: In accordance with the instruction inputted from an input device 15 through an input/output interface 14 by a user 2, a display object determination part 11 instructs a logical structure display part 12 and a contents display part 13 to display the logical structure or contents on an output device 16 through the input/output interface 14, thus presenting them to the user 2. In accordance with the mode, the display object determination part 11 displays or conceals only contents corresponding to an indicated logical object, contents corresponding to a partial tree having the logical object as the top, or contents corresponding to logical objects of the same attribute and changes the display form of them or displays a corresponding logical object from a part of indicated contents.
